

# OWOLABI DANIEL

[owohdaniel09@gmail.com](mailto:owohdaniel09@gmail.com) | +2347049961522

## PROFESSIONAL SUMMARY

---

Full-Stack Developer with a Computer Science background and experience building scalable web applications using modern technologies. Skilled in designing and developing responsive user interfaces, implementing robust backend APIs, and managing databases to deliver end-to-end solutions. Experienced with collaborative development workflows, version control, and deploying production-ready applications. Passionate about creating intuitive user experiences while maintaining efficient, maintainable, and high-performance systems.

## CORE TECHNICAL SKILLS

---

### Web & Software Development

React · Node.js · Next.js · Express.js · JavaScript (ES6+) · TypeScript · NestJS · HTML5 · ThreeJS · CSS3 · GraphQL · Tailwind CSS · EJS · REST APIs · UI/UX Implementation · Responsive Web Design · Version Control (Git & GitHub) · CI/CD (GitHub Actions)

### Backend Engineering & Databases

Express.js · Node.js · PostgreSQL · MongoDB (basic) · NestJS · Prisma · Authentication (JWT) · API Architecture · Server-Side Rendering · Routing & Middleware · Data Modeling · Query Optimization · Scalable Backend Architecture · Efficient API Structuring · Resource-Efficient Server Design

### Productivity & Collaboration Tools

Microsoft Office Suite (PowerPoint, Excel, Word, Outlook) · Microsoft Teams · SharePoint · Zoom · Google Meet · Documentation Management · Presentation Delivery

### Testing, Debugging & Quality Assurance

Component Testing · Functional Testing · Debugging React and Node.js Applications · UI/UX Bug Resolution · Performance Optimization · Code Review Best Practices

### Deployment & Development Workflow

Render · GitHub Workflow · Environment Management · Continuous Improvement · Project Documentation · API Testing with Postman · CI/CD (GitHub Actions) · Agile/Scrum Collaboration

### Performance & Optimization

Bundle Optimization · Caching Strategies (Redis) · Lazy Loading · API Response Optimization · Efficient Rendering in React · Asset Minification/Compression · Frontend & Backend Performance Debugging

### Scalable System Design

Scalable Architecture Design · Modular Code Structure · Component Reuse · API Load Handling · Deployment for Growth

### Additional Technical Strengths

Responsive UI Architecture · Template & Component Reuse · SEO-Friendly Development · Basic Cloud Deployment Practices · Cross-functional Team Communication

## PROFESSIONAL EXPERIENCE

---

### **Lead Full-Stack Engineer — BugSense (Self-Hosted Error Monitoring Platform)**

(Full Time | 02/2026 – 04/2026 | Lagos, Nigeria)

Live Application: <https://www.npmjs.com/package/@bugsense/bugsense-js>, <https://bugsendashboard-production.up.railway.app/>

Technologies: NestJS, Next.js, TypeScript, PostgreSQL, Prisma ORM, ClickHouse, Redis, BullMQ, Node.js, Tailwind CSS, Docker, Railway, Git, Google Gemini AI, REST APIs, Server-Sent Events, TCP Microservices, Turborepo, JWT, Resend, PostgreSQL, Supabase.

- Architected and led the end-to-end development of a production-grade, self-hosted error monitoring platform modelled on Sentry, managing a cross-functional team comprising a frontend developer and a backend developer across the full software development lifecycle.
- Designed and implemented a distributed NestJS microservices backend comprising three independently deployable services an ingestion service, an alert service, and an API gateway communicating over TCP transport, replacing a traditional monolithic architecture.
- Engineered a publishable npm SDK (bugsense-js) from scratch using TypeScript and tsup, enabling developers to capture unhandled exceptions, promise rejections, and network failures in both browser and Node.js environments with a single BugSense.init() call resolving the core problem of uncaught errors going undetected in production applications.
- Designed and implemented a complete user and project management system, including developer registration, JWT-based authentication, per-project API key generation, and role-based access control across project owner and member roles, enabling multiple teams to monitor separate applications from a single BugSense instance.
- Integrated ClickHouse as a time-series event store for high-volume error ingestion, designing a MergeTree schema with partition pruning, LowCardinality type optimisations, and rolling-window aggregation queries replacing PostgreSQL for event data to handle millions of error events efficiently.
- Built an asynchronous job processing pipeline using BullMQ and Redis, decoupling error ingestion from alert evaluation to prevent throughput bottlenecks, and implementing scheduled AI-powered error grouping jobs with configurable retry logic and exponential backoff.
- Integrated Google Gemini AI to automatically cluster similar errors into actionable issues and generate root cause analyses and suggested fixes from raw stack traces, reducing mean time to resolution for production errors.
- Developed a real-time Next.js 16 dashboard using React Server Components, Suspense streaming, and Server-Sent Events, delivering a live error feed that surfaces new production errors within milliseconds of ingestion without client-side polling.
- Implemented a threshold-based alert rules engine that monitors per-project error rates against configurable thresholds and dispatches email notifications via SMTP with Redis-backed cooldown tracking to prevent alert fatigue.
- Built source map processing into the ingestion pipeline, resolving minified production stack traces to their original source file, line, and column references to make errors immediately actionable without manual debugging.
- Containerised the full multi-service stack using Docker and deployed to Railway, configuring private internal networking between all six services three NestJS apps, Next.js dashboard, ClickHouse, and Redis with environment-specific variables, health checks, and persistent volumes.
- Applied structured Git workflows across the team, managing feature branches, pull request reviews, and deployment-ready releases throughout the project lifecycle.

## Full-Stack Engineer — Workvite (Team Task Manager)

(Full Time | 11/2025 – 02/2026 | Lagos, Nigeria)

 **Live Application:** <https://workvite.vercel.app>

**Technologies:** React, JavaScript (ES6+), Node.js, Express.js, Firebase Authentication, REST APIs, PostgreSQL / SQL, Prisma ORM, Tailwind CSS, Render, Git, ThreeJS, TypeScript

- Designed and developed a **full-stack web application** for **team collaboration and task management**, supporting organizations, projects, users, and role-based permissions.
- Built a **scalable backend** using **Node.js and Express.js**, implementing RESTful APIs, middleware, controllers, and structured routing.
- Implemented **authentication and authorization** using **Firebase Authentication**, including protected routes, token verification, and role-based access control.
- Designed and integrated **organization and team management workflows**, including organization creation, invite-only membership, and user-role assignment.
- Developed **CRUD APIs** for users, organizations, projects, and tasks, ensuring secure data access and consistent validation.
- Utilized **Prisma ORM and SQL indexing** to optimize database queries and improve application performance.
- Built a **responsive frontend UI** using **React and Tailwind CSS**, delivering a clean, accessible user experience across desktop and mobile devices.
- Implemented **client-side state handling**, loading states, error boundaries, and route guards to ensure stable navigation and data consistency.
- Integrated **deployment pipelines** and environment configuration for production using **Render**, including environment variables and backend/frontend connectivity.
- Debugged and resolved **production issues** related to authentication redirects, routing, and deployment

configuration using browser DevTools and server logs.

- Applied **best practices in version control** using **Git**, managing feature development, fixes, and deployment-ready code.
- Independently managed the entire software development lifecycle, including planning, UI design, backend development, testing, deployment, and iteration.

## Full-Stack Developer — Portfolio Website

( Remote | 01/2025 – 02/2025 | Lagos, Nigeria )

 **Live Application:** <https://owolabi-portfolio.vercel.app/>

- Designed and developed multiple **full-stack web platforms** using **React, Node.js, Express.js, PostgreSQL**, following modern architectural best practices.
- Built scalable backend systems with efficient API routes, structured controllers, middleware, authentication, and **query-optimized PostgreSQL database interactions**.
- Engineered **fully responsive UIs** using Tailwind CSS, ensuring smooth performance and consistency across devices (desktop, tablet, mobile).
- Created professional wireframes and prototypes with **Figma**, converting them into clean, production-ready React components.
- Integrated real-world features such as service booking, customer inquiries, admin dashboards, and secure form submissions.
- Implemented **API testing and debugging workflows** using Postman, ensuring reliable data exchange and stable backend performance.
- Managed the entire project lifecycle requirement gathering, UI design, backend development, testing, documentation, deployment.
- Designed SEO-friendly page structures, optimized bundles, compressed assets, and used caching strategies to improve loading speeds.
- Deployed applications to production using **Render**, configuring environments, uptime monitoring, and database connections.
- Collaborated with clients, delivered demos, collected feedback, and iterated quickly to improve project outcomes.
- Built and maintained your personal **portfolio website**, serving as a central hub for your projects, skills, and professional identity.

## Software Developer (Personal & Academic Project) — Covenant University

2024 | Covenant University, Nigeria

- Completed multiple academic and personal projects using **Java, Python, JavaScript, HTML5/CSS3, Flask, SQL, and PostgreSQL**, strengthening full-stack development fundamentals across backend logic, data management, and frontend UI structure.
- Designed and developed a **machine-learning-driven customer sentiment analysis system** that collects, processes, and classifies user feedback to generate meaningful business insights. Built using **Python, Flask, HTML/CSS, Scikit-Learn, NLTK sentiment analysis, NumPy and Pandas** the system includes a user-friendly web interface, model-based classification pipeline, and structured data visualization. Implemented version control with **Git/GitHub**, ensured modular code architecture, and documented the full development workflow.  
GitHub Repository: <https://github.com/YB009/CUSTOMER-REVIEW-MODEL>
- Strengthened problem-solving capabilities through intensive work on **algorithm design, data structures, debugging techniques, error handling, and computational logic** within academic assignments and project-based learning.
- Delivered multiple team-based software development tasks using **Git/GitHub** for collaboration, code reviews, branching strategies, and version-controlled project submissions.
- Applied **UI/UX design principles** using **Figma** for interface layout planning and **Canva** for presentation materials, creating visually structured user flows, prototype screens, and clear academic project documentation.

**Full-Stack Developer Intern — NUPRC (Nigerian Upstream Petroleum Regulatory Commission)**

6 Months | 2023 | Lagos, Nigeria | Government Digital Transformation Support

- Built multiple **demo web applications** using **React, Node.js, Express.js, HTML, CSS**, helping internal teams conceptualize digital modernization initiatives.
- Created intuitive **UI layouts and workflows** using Figma, ensuring clear user navigation and improved accessibility for non-technical staff.
- Delivered professional, well-structured presentations using **PowerPoint, Zoom, Google Meet, and SharePoint**, effectively communicating digital solution concepts to supervisors and cross-department teams.
- Designed clean, visually consistent slide decks in **Canva**, improving presentation clarity and engagement.
- Supported the modernization of internal processes by building **interactive prototypes**, documenting workflows, and organizing shared resources on SharePoint.
- Collaborated with engineers, analysts, and administrative staff to gather requirements, clarify user needs, and translate them into software features and UI components.
- Assisted with debugging and improving UI performance, optimizing rendering, responsiveness, and user experience across demo applications.
- Improved workflow efficiency by creating **standardized templates**, reusable components, and structured documentation for technical and non-technical audiences.

**CERTIFICATION & EDUCATION**

---

**CERTIFICATIONS**

- Cybersecurity Essentials — Cisco Networking Academy (2024)
- Responsive Web Design Certification — FreeCodeCamp (2024)
- The Complete Full-Stack Web Development Bootcamp — Udemy (2025)

**EDUCATION**

- B.Sc. Computer Science — Covenant University, Nigeria (2021–2025)
